Chemistry and Physics of Lipids, 49 (1989) 291—294
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 49 (1989)

adult respiratory distress syndrome, surfactant inactivation, surface properties, respiratory distress syndrome, 49
analogue, phosphonolipid, isostere, phosphatidic acid, phosphatidyl choline, 1
1-anilinonaphthalene 8-sulfonic acid, glycosphingolipids, liposomes, monolayers, interfacial micropolarity, 111
arachidonic acid peroxidation, liposomes, calorimetry, fluorescence, phospholipids, 135
azobenzene-chromophore, circular dichroism active phospholipid, circular dichroism active liposome, circular dichroism enhancement, lipid-lipid interaction, cinnamoyl-chromophore, 69

1,2-bis(10,12-tricosadiynoyl)-*sn*-glycero-3-phosphocholine, polymerizable lipid, diacetylene, X-ray structure, tubule, 39

calcium, dipalmitoylphosphatidylglycerol, propylgallate, phase transition, differential scanning calorimetry, subtransition, 225
calorimetry, arachidonic acid peroxidation, liposomes, fluorescence, phospholipids, 135
cardiolipid, diphosphatidylglycerol, peroxidation, high-performance liquid chromatography, 215
chainlength, liposomes, phosphatidyl cholines, sizes, quasi-elastic light scattering, 271
charge-transfer interaction, phospholipid liposome, thermodynamics, spectral characteristics, kinetics, 57
cholesterol, gramicidin, polylysine, intercalation, liposomes, phosphatidylcholine, 87
cholesterol, phospholipids, glycolipids, hydration, inverted micelles, 179
cholesterol, X-ray diffraction, phase transitions, phospholipid, membranes, 265
cinnamoyl-chromophore, circular dichroism active phospholipid, circular dichroism active liposome, circular dichroism enhancement, lipid-lipid interaction, azobenzene-chromophore, 69
circular dichroism active liposome, circular dichroism active phospholipid, circular dichroism enhancement, lipid-lipid interaction, azobenzene-chromophore, cinnamoyl-chromophore, 69
circular dichroism active phospholipid, circular dichroism active liposome, circular dichroism enhancement, lipid-lipid interaction, azobenzene-chromophore, cinnamoyl-chromophore, 69
collapse plateau ratios, pulmonary surfactant models, surface respreading, Langmuir-Wilhelmy balance, 81

deuterium NMR, membranes, phosphatidylcholine, differential scanning calorimetry, moment analysis, phytol, phytanic acid, 205
deuterium NMR, ^{31}P-NMR, low density lipoprotein-heparin soluble complexes, low density lipoprotein-chondroitin sulfate soluble complexes, low-density lipoprotein-glycosaminoglycan interaction, light scattering, 15
deuterium NMR, pentagastrin, peptide-lipid interaction, dimyristoylphosphatidylcholine, phosphorous NMR, 105
diacetylene, polymerizable lipid, X-ray structure, tubule, 1,2-bis(10,12-tricosadiynoyl)-*sn*-glycero-3-phosphocholine, 39
differential scanning calorimetry, dipalmitoylphosphatidylglycerol, propylgallate, phase transition, calcium, subtransition, 225
differential scanning calorimetry, deuterium NMR, membranes, phosphatidylcholine, moment analysis, phytol, phytanic acid, 205
differential scanning calorimetry, phase transition, hexagonal phase, phosphatidylethanolamine, 101
dimyristoylphosphatidylcholine, pentagastrin, peptide-lipid interaction, deuterium NMR, phosphorous NMR, 105
dimyristoylphosphatidylcholine, quasi-elastic light scattering, infrared spectroscopy, Raman spectroscopy, large unilamellar vesicles, ethanol, phase transition, 143
dipalmitoylphosphatidylglycerol, propylgallate, phase transition, calcium, differential scanning calorimetry, subtransition, 225
diphosphatidylglycerol, cardiolipid, peroxidation, high-performance liquid chromatography, 215

electrostatics, lipid monolayers, fluorescence microscopy, phase transitions, model membranes, 231
epithio, epoxy, fatty acid, synthesis, physical properties, 167
epoxy, epithio, fatty acid, synthesis, physical properties, 167
ethanol, quasi-elastic light scattering, infrared spectroscopy, Raman spectroscopy, large unilamellar vesicles, dimyristoylphosphatidylcholine, phase transition, 143
ethyl (*Z*)-9-(*E*)-11-(*E*)-13-(*Z*)-15-octadecatetraenoate, ethyl *cis*-9,10-epoxy-(*Z*)-12-(*Z*)-15-octadecadienoate, ethyl *cis*-12,13-epoxy-(*Z*)-9-(*Z*)-15-octadecadienoate, ethyl *cis*-

15,16-epoxy-(*Z*)-9-(*Z*)-12-octadecadienoate, ethyl *cis*-9,10-*cis*-12,13-cis-15,16-triepoxyoctadecanoate, 221

fatty acid, epoxy, epithio, synthesis, physical properties, 167
fluorescence, arachidonic acid peroxidation, liposomes, calorimetry, phospholipids, 135
fluorescence anisotropy, fluorescence lifetime distributions, membrane fluidity, 185
fluorescence lifetime distributions, fluorescence anisotropy, membrane fluidity, 185
fluorescence microscopy, lipid monolayers, phase transitions, model membranes, electrostatics, 231
fluorescence quenching, Tangier disease, low-density lipoproteins, lipid-protein interaction, 153

glycolipids, phospholipids, cholesterol, hydration, inverted micelles, 179
glycosphingolipids, liposomes, monolayers, 1-anilinonaphthalene 8-sulfonic acid, interfacial micropolarity, 111
glycosphingolipids, two-dimensional ^{1}H-NMR, *Z,E* ceramides, 31
gramicidin, cholesterol, polylysine, intercalation, liposomes, phosphatidylcholine, 87

hexagonal phase, phase transition, differential scanning calorimetry, phosphatidylethanolamine, 101
high-performance liquid chromatography, cardiolipid, diphosphatidylglycerol, peroxidation, 215
hydration, phospholipids, glycolipids, cholesterol, inverted micelles, 179
hydrolysis, ozonolysis, lipases, 97
α-hydroxyphosphonate, phosphonolipid, phosphatidic acid, isosteres, 131

infrared spectroscopy, quasi-elastic light scattering, Raman spectroscopy, large unilamellar vesicles, dimyristoylphosphatidylcholine, ethanol, phase transition, 143
intercalation, cholesterol, gramicidin, polylysine, liposomes, phosphatidylcholine, 87
interfacial micropolarity, glycosphingolipids, liposomes, monolayers, 1-anilinonaphthalene 8-sulfonic acid, 111
inverted micelles, phospholipids, glycolipids, cholesterol, hydration, 179
isostere, phosphonolipid, phosphatidic acid, analogue, phosphatidyl choline, 1
isosteres, phosphonolipid, phosphatidic acid, α-hydroxyphosphonate, 131

15-ketosterol, metabolism, sterol synthesis, 243
kinetics, phospholipid liposome, change-transfer interaction, thermodynamics, spectral characteristics, 57

Langmuir-Wilhelmy balance, pulmonary surfactant models, surface respreading, collapse plateau ratios, 81
large unilamellar vesicles, quasi-elastic light scattering, infrared spectroscopy, Raman spectroscopy, dimyristoylphosphatidylcholine, ethanol, phase transition, 143
lateral chain-chain spacing, Raman spectroscopy, lipid bilayers, order parameters, 197
light scattering, deuterium NMR, ^{31}P-NMR, low density lipoprotein-heparin soluble complexes, low density lipoprotein-chondroitin sulfate soluble complexes, low-density lipoprotein-glycosaminoglycan interaction, 15
lipases, ozonolysis, hydrolysis, 97
lipid-lipid interaction, circular dichroism active phospholipid, circular dichroism active liposome, circular dichroism enhancement, azobenzene-chromophore, cinnamoyl-chromophore, 69
lipid-protein interaction, fluorescence quenching, Tangier disease, low-density lipoproteins, 153
lipid bilayers, Raman spectroscopy, order parameters, lateral chain-chain spacing, 197
lipid minimal surface, membrane phase transitions, non-bilayer conformation, 65
lipid monolayers, fluorescence microscopy, phase transitions, model membranes, electrostatics, 231
lipoamino acid, *Mycobacteria,* mass spectrometry, lysine esters, 161
liposomes, arachidonic acid peroxidation, calorimetry, fluorescence, phospholipids, 135
liposomes, cholesterol, gramicidin, polylysine, intercalation, phosphatidylcholine, 87
liposomes, glycosphingolipids, monolayers, 1-anilinonaphthalene 8-sulfonic acid, interfacial micropolarity, 111
liposomes, phosphatidyl cholines, chainlength, sizes, quasi-elastic light scattering, 271
low-density lipoprotein-glycosaminoglycan interaction, deuterium NMR, ^{31}P-NMR, low density lipoprotein-heparin soluble complexes, low density lipoprotein-chondroitin sulfate soluble complexes, light scattering, 15
low-density lipoproteins, fluorescence quenching, Tangier disease, lipid-protein interaction, 153
low density lipoprotein-chondroitin sulfate soluble complexes, deuterium NMR, ^{31}P-NMR, low density lipoprotein-heparin soluble complexes, low-density lipoprotein-glycosaminoglycan interaction, light scattering, 15
low density lipoprotein-heparin soluble complexes, deuterium NMR, ^{31}P-NMR, low density lipoprotein-chondroitin sulfate soluble complexes, low-density lipoprotein-glycosaminoglycan interaction, light scattering, 15
lysine esters, *Mycobacteria,* lipoamino acid, mass spectrometry, 161

mass spectrometry, *Mycobacteria,* lipoamino acid, lysine esters, 161
membranes, deuterium NMR, phosphatidylcholine, differential scanning calorimetry, moment analysis, phytol, phytanic acid, 205
membranes, X-ray diffraction, phase transitions, phospholipid, cholesterol, 265
membrane fluidity, fluorescence anisotropy, fluorescence lifetime distributions, 185
membrane phase transitions, non-bilayer conformation, lipid minimal surface, 65

metabolism, 15-ketosterol, sterol synthesis, 243
model membranes, lipid monolayers, fluorescence microscopy, phase transitions, electrostatics, 231
moment analysis, deuterium NMR, membranes, phosphatidylcholine, differential scanning calorimetry, phytol, phytanic acid, 205
monolayers, glycosphingolipids, liposomes, 1-anilinonaphthalene 8-sulfonic acid, interfacial micropolarity, 111
monovalent cation, phospholipids, polyvalent cation, vesicle fusion, 9
Mycobacteria, lipoamino acid, mass spectrometry, lysine esters, 161

^{31}P-NMR, deuterium NMR, low density lipoprotein-heparin soluble complexes, low density lipoprotein-chondroitin sulfate soluble complexes, low-density lipoprotein-glycosaminoglycan interaction, light scattering, 15
non-bilayer conformation, membrane phase transitions, lipid minimal surface, 65

order parameters, Raman spectroscopy, lipid bilayers, lateral chain-chain spacing, 197
ozonolysis, hydrolysis, lipases, 97

pentagastrin, peptide-lipid interaction, deuterium NMR, dimyristoylphosphatidylcholine, phosphorous NMR, 105
peptide-lipid interaction, pentagastrin, deuterium NMR, dimyristoylphosphatidylcholine, phosphorous NMR, 105
peroxidation, cardiolipid, diphosphatidylglycerol, high-performance liquid chromatography, 215
phase transition, differential scanning calorimetry, hexagonal phase, phosphatidylethanolamine, 101
phase transition, dipalmitoylphosphatidylglycerol, propylgallate, calcium, differential scanning calorimetry, subtransition, 225
phase transition, quasi-elastic light scattering, infrared spectroscopy, Raman spectroscopy, large unilamellar vesicles, dimyristoylphosphatidylcholine, ethanol, 143
phase transitions, lipid monolayers, fluorescence microscopy, model membranes, electrostatics, 231
phase transitions, X-ray diffraction, phospholipid, cholesterol, membranes, 265
phosphatidic acid, phosphonolipid, α-hydroxyphosphonate, isosteres, 131
phosphatidic acid, phosphonolipid, isostere, analogue, phosphatidyl choline, 1
phosphatidylcholine, cholesterol, gramicidin, polylysine, intercalation, liposomes, 87
phosphatidylcholine, deuterium NMR, membranes, differential scanning calorimetry, moment analysis, phytol, phytanic acid, 205
phosphatidylethanolamine, phase transition, differential scanning calorimetry, hexagonal phase, 101
phosphatidyl choline, phosphonolipid, isostere, phosphatidic acid, analogue, 1
phosphatidyl cholines, liposomes, chainlength, sizes, quasi-elastic light scattering, 271
phospholipid, X-ray diffraction, phase transitions, cholesterol, membranes, 265
phospholipids, arachidonic acid peroxidation, liposomes, calorimetry, fluorescence, 135
phospholipids, glycolipids, cholesterol, hydration, inverted micelles, 179
phospholipids, monovalent cation, polyvalent cation, vesicle fusion, 9
phospholipid liposome, charge-transfer interaction, thermodynamics, spectral characteristics, kinetics, 57
phosphonolipid, isostere, phosphatidic acid, analogue, phosphatidyl choline, 1
phosphonolipid, phosphatidic acid, α-hydroxyphosphonate, isosteres, 131
phosphorous NMR, pentagastrin, peptide-lipid interaction, deuterium NMR, dimyristoylphosphatidylcholine, 105
physical properties, epoxy, epithio, fatty acid, synthesis, 167
phytanic acid, deuterium NMR, membranes, phosphatidylcholine, differential scanning calorimetry, moment analysis, phytol, 205
phytol, deuterium NMR, membranes, phosphatidylcholine, differential scanning calorimetry, moment analysis, phytanic acid, 205
polylysine, cholesterol, gramicidin, intercalation, liposomes, phosphatidylcholine, 87
polymerizable lipid, diacetylene, X-ray structure, tubule, 1,2-bis(10,12-tricosadiynoyl)-*sn*-glycero-3-phosphocholine, 39
polyvalent cation, phospholipids, monovalent cation, vesicle fusion, 9
propylgallate, dipalmitoylphosphatidylglycerol, phase transition, calcium, differential scanning calorimetry, subtransition, 225
pulmonary surfactant models, surface respreading, collapse plateau ratios, Langmuir-Wilhelmy balance, 81

quasi-elastic light scattering, infrared spectroscopy, Raman spectroscopy, large unilamellar vesicles, dimyristoylphosphatidylcholine, ethanol, phase transition, 143
quasi-elastic light scattering, liposomes, phosphatidyl cholines, chainlength, sizes, 271

Raman spectroscopy, lipid bilayers, order parameters, lateral chain-chain spacing, 197
Raman spectroscopy, quasi-elastic light scattering, infrared spectroscopy, large unilamellar vesicles, dimyristoylphosphatidylcholine, ethanol, phase transition, 143
reactions of 3β-benzoyloxy-14α,15α-epoxy-5α-cholest-7-ene, sterol synthesis, 119
respiratory distress syndrome, surfactant inactivation, surface properties, adult respiratory distress syndrome, 49

sizes, liposomes, phosphatidyl cholines, chainlength, quasi-elastic light scattering, 271
spectral characteristics, phospholipid liposome, charge-transfer interaction, thermodynamics, kinetics, 57
sterol synthesis, 15-ketosterol, metabolism, 243
sterol synthesis, reactions of 3β-benzoyloxy-14α,15α-epoxy-5α-cholest-7-ene, 119

subtransition, dipalmitoylphosphatidylglycerol, propylgallate, phase transition, calcium, differential scanning calorimetry, 225
surface properties, surfactant inactivation, respiratory distress syndrome, adult respiratory distress syndrome, 49
surface respreading, pulmonary surfactant models, collapse plateau ratios, Langmuir-Wilhelmy balance, 81
surfactant inactivation, surface properties, respiratory distress syndrome, adult respiratory distress syndrome, 49
synthesis, epoxy, epithio, fatty acid, physical properties, 167

Tangier disease, fluorescence quenching, low-density lipoproteins, lipid-protein interaction, 153
thermodynamics, phospholipid liposome, charge-transfer interaction, spectral characteristics, kinetics, 57
tubule, polymerizable lipid, diacetylene, X-ray structure, 1,2-bis(10,12-tricosadiynoyl)-*sn*-glycero-3-phosphocholine, 39
two-dimensional ^{1}H-NMR, glycosphingolipids, *Z,E* ceramides, 31

vesicle fusion, phospholipids, monovalent cation, polyvalent cation, 9

X-ray diffraction, phase transitions, phospholipid, cholesterol, membranes, 265
X-ray structure, polymerizable lipid, diacetylene, tubule, 1,2-bis(10,12-tricosadiynoyl)-*sn*-glycero-3-phosphocholine, 39

Z,E ceramides, two-dimensional ^{1}H-NMR, glycosphingolipids, 31
